# SCYTALES

Mobile Validator: Streamlined Validation for Mobile Identities and Driving Licences

The Scytáles Mobile Validator allows you to validate all Digital ID Wallets, Mobile Identities and Mobile Driving Licences compliant with ISO 18013-5

Instant Validation and Authentication

The Scytáles Mobile Validator allows relying parties to inspect and verify Digital ID Wallets (multi-document) or a single Mobile ID or Mobile Driving Licence for instant validation and authentication with the identity provider. It can verify either the full credentials of the holder or selective data such as the holder's age, address, or other necessary credentials. It works in both online and offline modes with an interoperability module. The data is read similarly from all issuing authorities, identity providers and trust centers through a trusted list.

Mobile Validator Integrations

Scytáles is offering its customers and partners the product as a core engine that can be integrated directly with various trusted relying partners' interfaces and readers (e.g. Desko, Famoco, Zebra, Tablets, Coppernic, Datalogic).

Mobile Validator Features and Capabilities

The Mobile Validator is enhanced with an automated process that can be performed on a wide variety of devices, from sophisticated e-gates, desktops, and workstation terminals reading the ISO QR code as well as standard NFC and Bluetooth-enabled smartphones and tablets.

The Mobile Validator is able to do in-person validation over the counter for an ISO mDL/mID Registration, and registration can also be done over a Video Call Screen (Skype, Zoom or equivalent). The holder does not have to pick up the driving licence or passport on-site or via registered mail but can instead download it in seconds via screen, and the issuing authority and the holder save both time and money.

The Mobile Validator can also read all driving licence privileges in the ISO mDL and ISO mDL/mID via QR codes on the Apple Watch, with Siri activation and face recognition.

Why choose Scytáles

Scytáles Mobile Validator for iOS and Android has **successfully passed a conformity assessment against ISO 18013-5** by UL's Identity Management & Security division, the global safety science leader. The conformity assessment evaluates compliance with consensus standards and technical regulations of ISO 18013-5.

Scytáles is a strong driving force in the ISO working group for the mDL, and we are fully compliant with this standard as of today. We represent Sweden (SIS) as an expert through the Standardization Body and Task Force 14 on mDL within ISO/IEC JTC1/SC17/WG10.

How can the Scytáles Mobile Validator be delivered?

When it comes to delivering a versatile and powerful Mobile Validator, flexibility is critical. We understand that different organizations have varying requirements and approaches to implementing such solutions. That's why we offer multiple delivery options to cater to your unique needs.

Stand-Alone Project Development
If you're starting from scratch or need a dedicated Mobile Validator solution, our team can develop a whole new project specifically tailored to your objectives. This approach offers a clean slate for creating a customised solution that aligns perfectly with your requirements and branding.

Integration with Existing Solutions
We recognise the importance of seamless integration with your current systems. Whether it's an existing solution or a broader identity management platform, our Mobile Validator can be integrated as a complementary component. This ensures you can enhance your current offerings without needing a complete overhaul

Modular Development with SDKs
Sometimes, you may prefer a modular approach, selecting specific features or functionalities from our Mobile Validator using Software Development Kits (SDKs). This option allows you to integrate only the most relevant elements to your needs. It's a practical way to maintain flexibility and scalability while optimizing resources.

No matter which delivery option you choose, the Scytáles Mobile Validator is designed to meet the highest industry standards for security, usability, and performance. We're committed to providing you with a solution that not only fits your immediate requirements but also scales with your organization's growth. Plus, with our team of experts and comprehensive support, you'll have the guidance you need throughout the entire process..

Discover how our Mobile Validator can transform your digital identity management strategy by getting in touch with our team to help you select the delivery method that aligns best with your goals and infrastructure.
